Coming Soon - New R744 and A2L Training Rigs

30th May 2019

Steve and Alan are currently installing the first part of our new R744 transcritical booster system. The photos show the LT cold room with the evaporator controllers and the HT evaporators, all installed this week. The SCM pack should arrive within the next few weeks.

The new system will be used to enhance our one day R744 (C15) course which covers the basics of R744, safe handling and introduces transcritical and booster technology. We will use it to demonstrate transcritical operation and for practical exercises.

R744 Water Cooled Condensing Unit

In addition to the new R744 pack system, our HT and LT CUBO2 Smart air cooled condensing unit systems are soon to be supplemented by the installation of the water cooled version – CUBO Aqua. This will then become part of the C14 R744 CUBO condensing unit course.

A2L Condensing Unit

Also coming soon our first A2L condensing unit is on order! This will enhance our Flammable Refrigerants training session (C6).

Exciting and busy times at Cool Concerns – updates will follow.
